Enhance Speech Text Alignment For Prosody Modeling And Prediction In TTS

Aghilas Sini

Université de Rennes 1

13/01/2017

Forced Alignment

Adapting The Default Acoustic Model

Why?

- Adapt data properties (words, phonemes ...)
- Voice characteristics.
- Take account recording environment (robustness)
- Accurate boundaries (words, silences ...)

Text Pre-processing(Classical Problems)

Since the texts are too long

- sentence end detection (choice should be done..)
- Dealing with abbreviations.
- Recognizing Acronyms and URLs.
- Processing numbers
- Dealing with idioms and proper name.

Note: I'm trying to solve the above problems using different existing toolkit, this introduce another issues... And I think that we need manual checking ...

Gaëlle Vidal Work to Complete!!
